To Whom It May Concern:

B.D. Engine currently is using two Quadra Jet parts washers Models 225 and 150 in our Transmission and Torque Convertor departments.

We have been very satisfied with the durability of both these machines and would not hesitate to purchase another Quadra Jet machine to meet our additional requirements, or recommend them to potential buyers who happen to be in the market for a good reliable parts washer.

The level of after sales, service from B&F Manufacturing has been outstanding, something everyone should consider prior to their Parts Washer purchase.

Regards,

Steve Troyan

Nanaimo, B.C.

Attn: Gord Coyne

Just thought I'd send a letter of thanks on behalf of all the field / shop staff at our Red Deer facility for introducing us to the "Quadra- Jet" parts washer. We've had the Model 225 in service for close to a year now and it's still just like new. Working in the oilpatch with downhole isolation tools can at times be extremely hectic, as has been the case for the past several years, and quite frankly was getting to the point where we were really struggling to keep up with tool parts cleaning and repair end of things.

With the "Quadra- Jet" in action, the crew can load it up with parts and be repairing tools while the machine is cleaning the next batch, streamlining the whole process and drastically increasing turn around time with the parts coming out clean and ready to assemble. Your machine is "just what the doctor ordered" for a busy tool shop like ours with the "225" running multiple cycles per day saving countless man hours on parts cleaning and keeping us on track with our tool repairs.

In closing, I'd have to say that if you ever tried to get your "225" out of our shop now, you'd have a bit of battle on your hands. Thanks again for a fine machine with service to match, and feel free to add us to your reference list of happy customers.

Regards,

Ron Wilkin

B & F Manufacturing
114 Bowlsby Sty.
Nanaimo, B.C.
V9R 6Z8

To Whom It May Concern:

We currently have two "Quadra Jet 250" parts washers. The first was purchased in 1995 the second in 1998. These machines have been used on a daily basis and have not shown any signs of deterioration.

The cleaning capability of these machines is superior to others we have used. We are especially pleased with the built in oil skimmer, which has proven to perform up to our expectations.

B & F Manufacturing has performed preventative maintenance on regular basis and their excellent service makes them a dependable company to deal with.

When we purchase our next parts washer we will contact B & F Manufacturing about the "Quadra Jet".

Sincerely,

John Turner,
Supervisor,
Heavy Fleet Maintenance
