

We purchased a Quadra Jet M-225 parts washer a year ago to use in our millwright shop. It is being used in the oilfield sector in our maintenance shop. It performs excellent. Every piece of equipment we have washed (pumps, wellheads, piping, suction screens) have come out spotless. It takes heavy oil and paint of the products which eliminates hours of cleaning time. Switching to this type of washer has also eliminated the smell and use of other hazardous chemicals, aka varsol. Since this initial purchase we have purchased 2 more. I highly recommend to anyone that wants a low maintenance, very efficient parts washer in their workplace.
